Recall #: N192217410 | Reduction in Vacuum Brake Assist Canada Only Recall Date: 2019 Jun 27

Recall Description

General Motors has approved a safety recall in Canada for certain 2017 model year Chevrolet Silverado LD, GMC Sierra LD, Cadillac Escalade,

Chevrolet Suburban, Chevrolet Tahoe, and GMC Yukon vehicles, that, in some circumstances, may have a condition in which the engine-mounted mechanical vacuum pump output may decrease over time, decreasing the amount of vacuum/power brake assist. If the vacuum level drops, customers may experience increased brake pedal effort, hard brake pedal, and/or potentially increased stopping distance. The Drivers Information Centre (DIC) Service brake assist alert will activate 2-5 minutes after the vacuum level drops, and a Diagnostic Trouble Code (DTC) will also be set. Even where this condition occurs, the hydraulic brake system remains functional. The condition is more prevalent at low speed when softly applying the brakes. Failure to follow recommended oil change intervals could contribute to this condition.

Remedy

Dealers are to reprogram the electronic brake control module (EBCM).

This recall was open as of the date/time that this report was generated. For more information, or to find out if the recall has been closed, please contact GMC or visit GM's website.
